Precision Agriculture: Drones Impact

Vassilis Polychronos
GeoSense CTO

Our Business Verticals

SURVEYING

- Land surveying
- Mining surveying
- GIS & Mapping
- Forensics
- Thermal Modeling

beyond
GeoSense
standards

AGRICULTURE

- **Crop Science**
- **Forestry**
- **Turfgrass Management**

CONSTRUCTION

- Earthworks
- Site Management
- Building Inspection
- BIM

REAL ESTATE

- Communication
- Landscape Modeling
- Architecture
- Hobby & Design

“*In the current milieu, use of sustainable information and communication technology in agriculture is not an option. It is a necessity.*”

Gerard Sylvester, Knowledge and Information Management Officer
Food and Agriculture Organization, UN

FACTS

PLANET'S POPULATION IS
EXPECTED 9.7bil BY 2050

YIELD PRODUCTION MUST
INCREASE 70%

NEED TO BOOST
ECOFLIENDLY PRACTICES

SHORTAGE OF LABOUR
CHANGES IN CONSUMER
PREFERENCES

CLIMATE CHANGE

SORTAGE OF NATURAL
RESOURCES

RISING COSTS OF SUPPLIES

Advancements in Technology have made Modern Agriculture
Technology a reality aiming at:

- Higher Crop Production
- Decreased use of water, fertilizer and pesticides – Thus less input cost
- Reduced impact of natural ecosystem
- Less runoff chemicals into rivers and groundwater

DRONES in AGRICULTURE

SCOUT

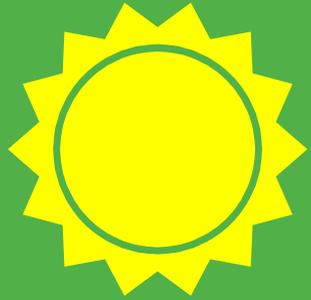

Fast, Actual, Efficient, Accurate and Objective bird's eye view to crops, reveals issues such as irrigation problems, soil variation, and stress

ASSESS

Collect actionable data to identify and measure the problem, document it and report it for insurance claims

MEASURE

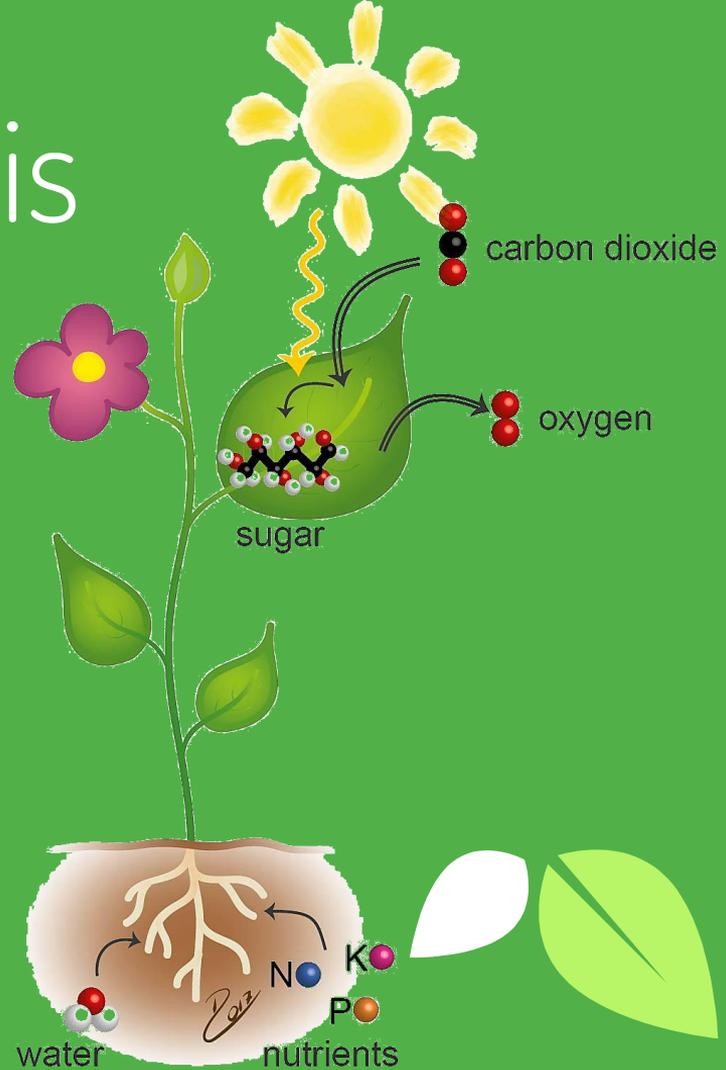

Create Prescription maps, Measure the treatment cost, apply accurate treatment in every field zone. Keep your running costs under control

How Drones Are Revolutionizing Agriculture?

Photosynthesis

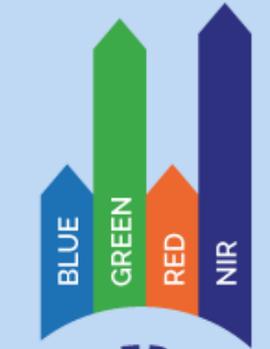

The biggest biochemical
reaction in planet

Vegetation Index

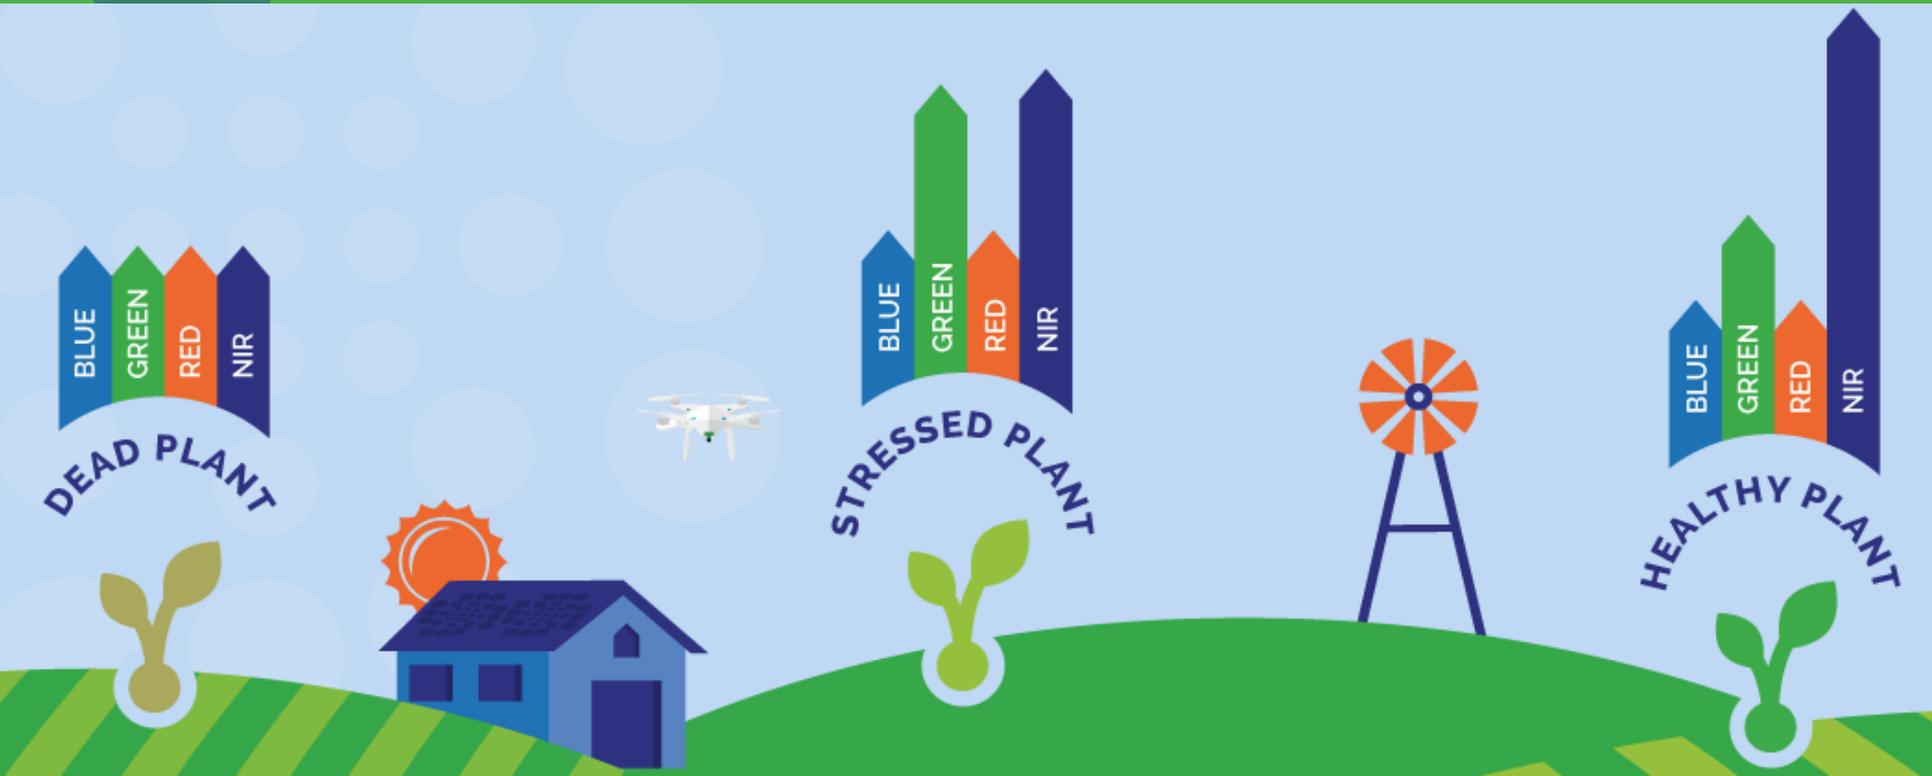

DEAD PLANT

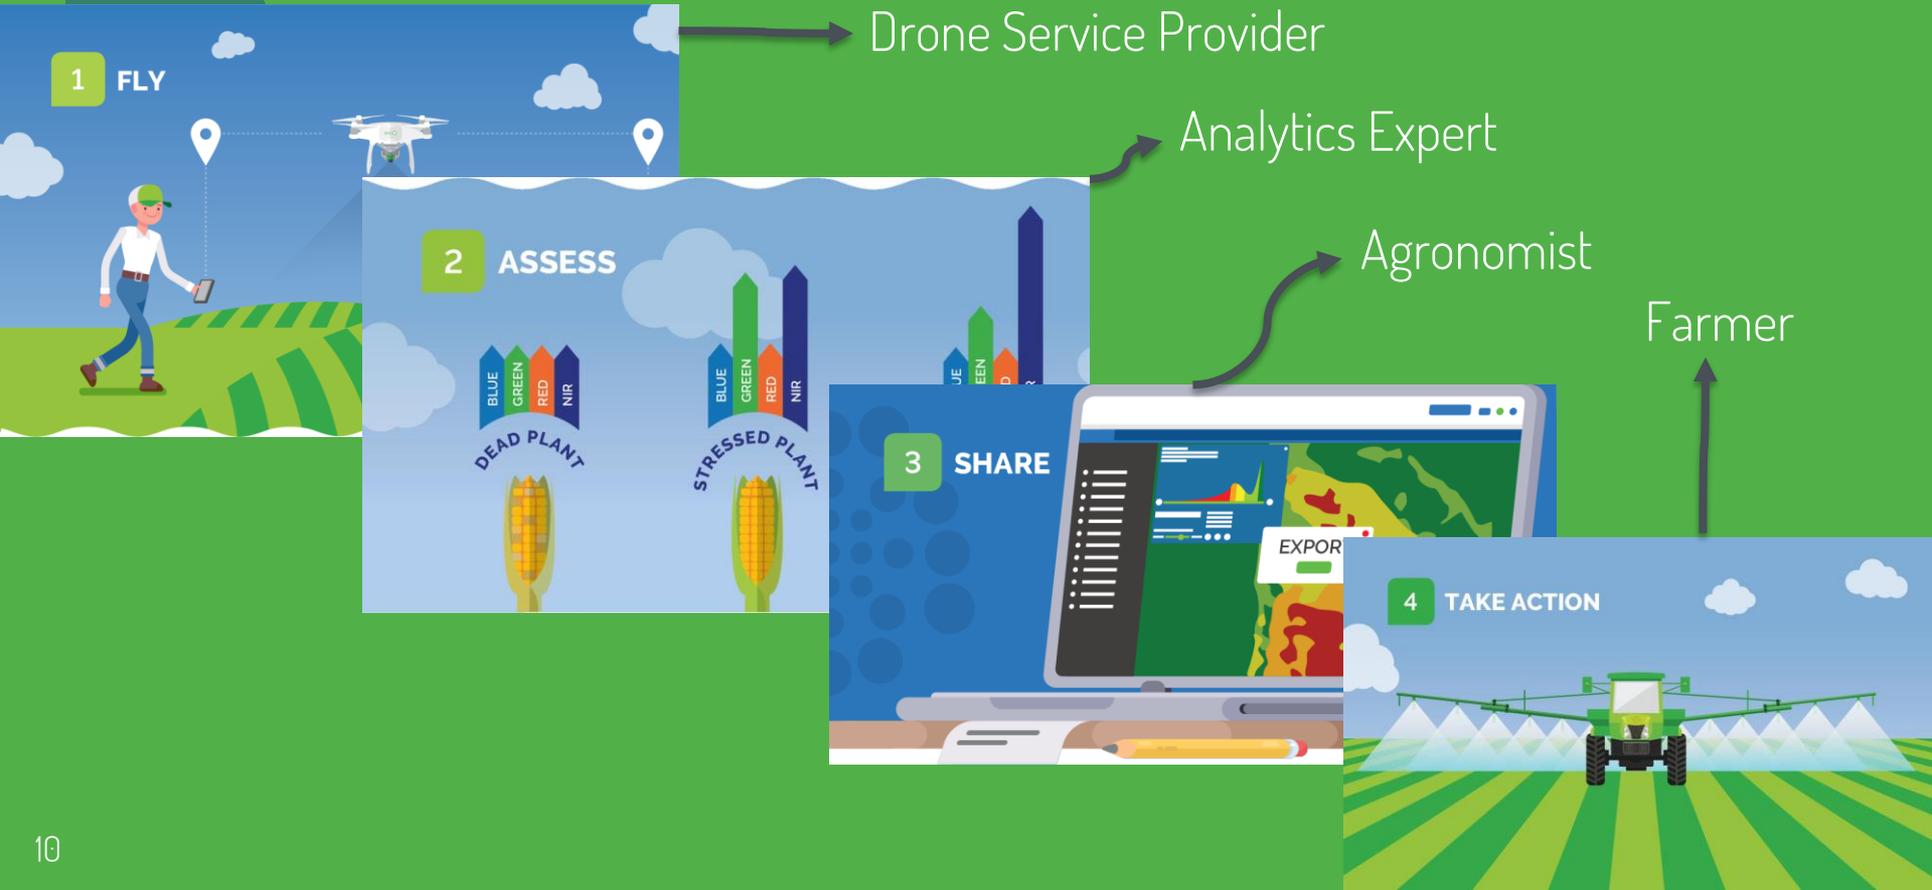

STRESSED PLANT

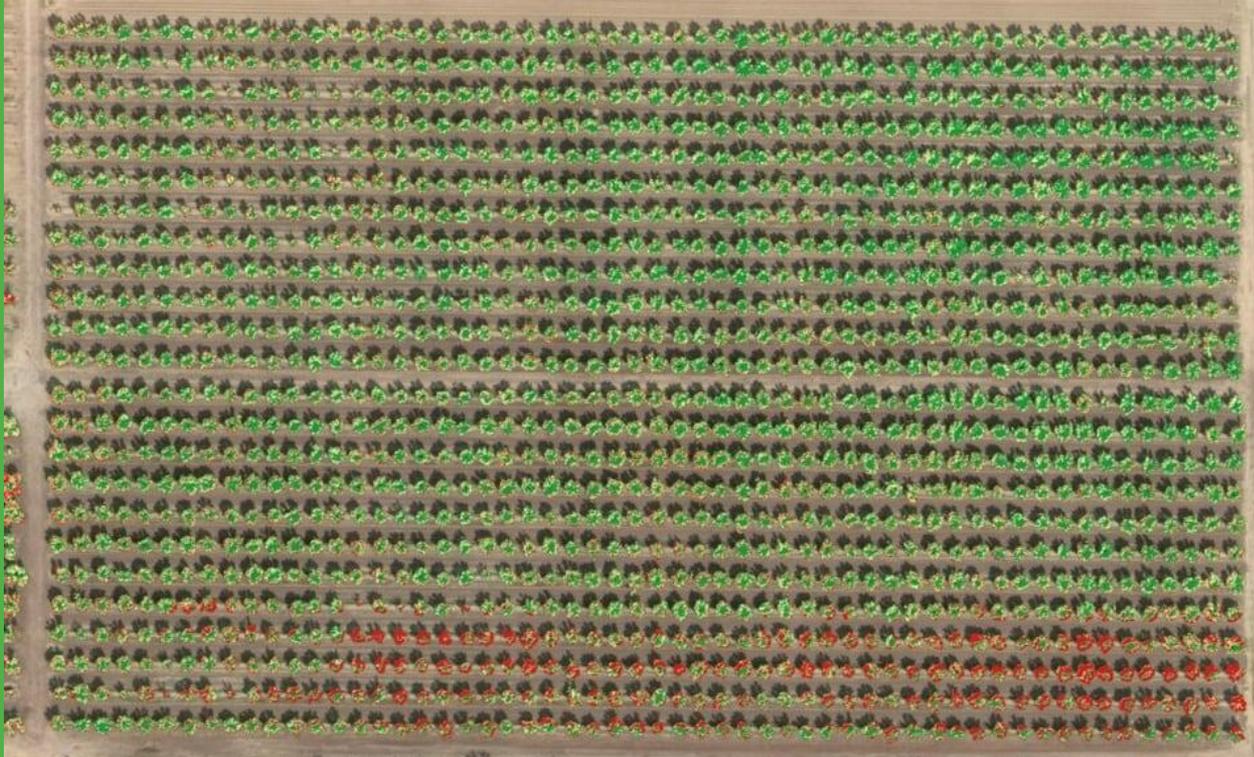

HEALTHY PLANT

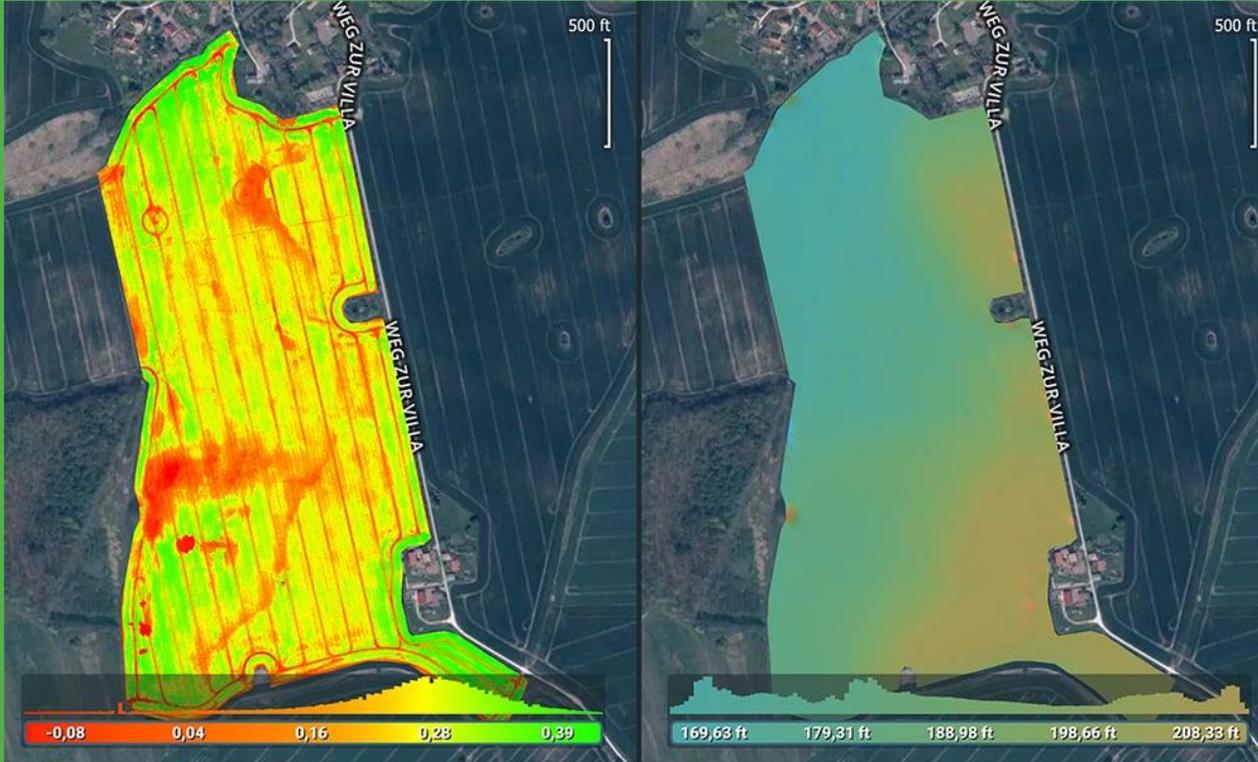

Workflow and Roles

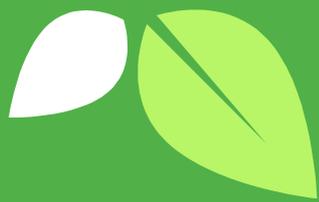

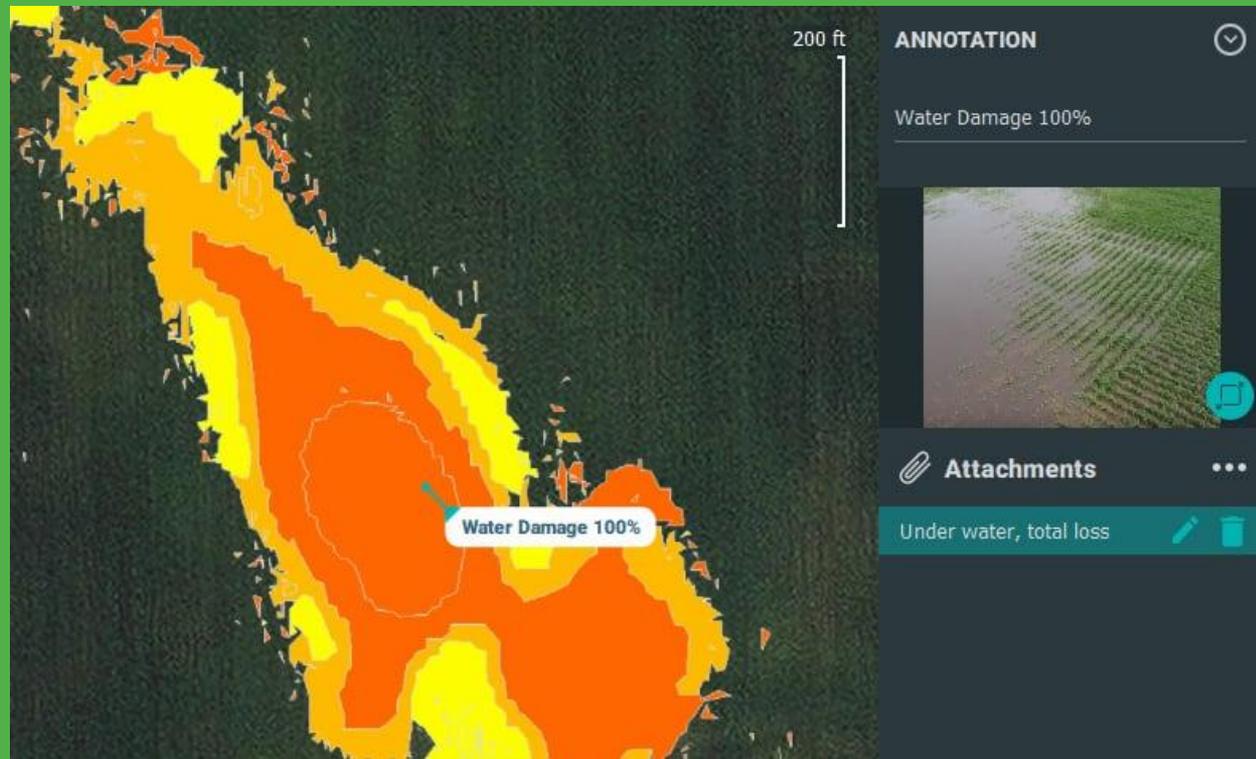

Chlorosis Study

Identify Irrigation problems

Damage Assessment

Plant Counting

PLANTS COUNTED

58,102

AVERAGE PLANT DENSITY

65,283.1 / Hectare

PLANNED SEEDING DENSITY

67,000.0 / Hectare

The difference between the counted number of plants and the planned number of plants is

3% 

UNDER NORM

which is close to **1,528** plants

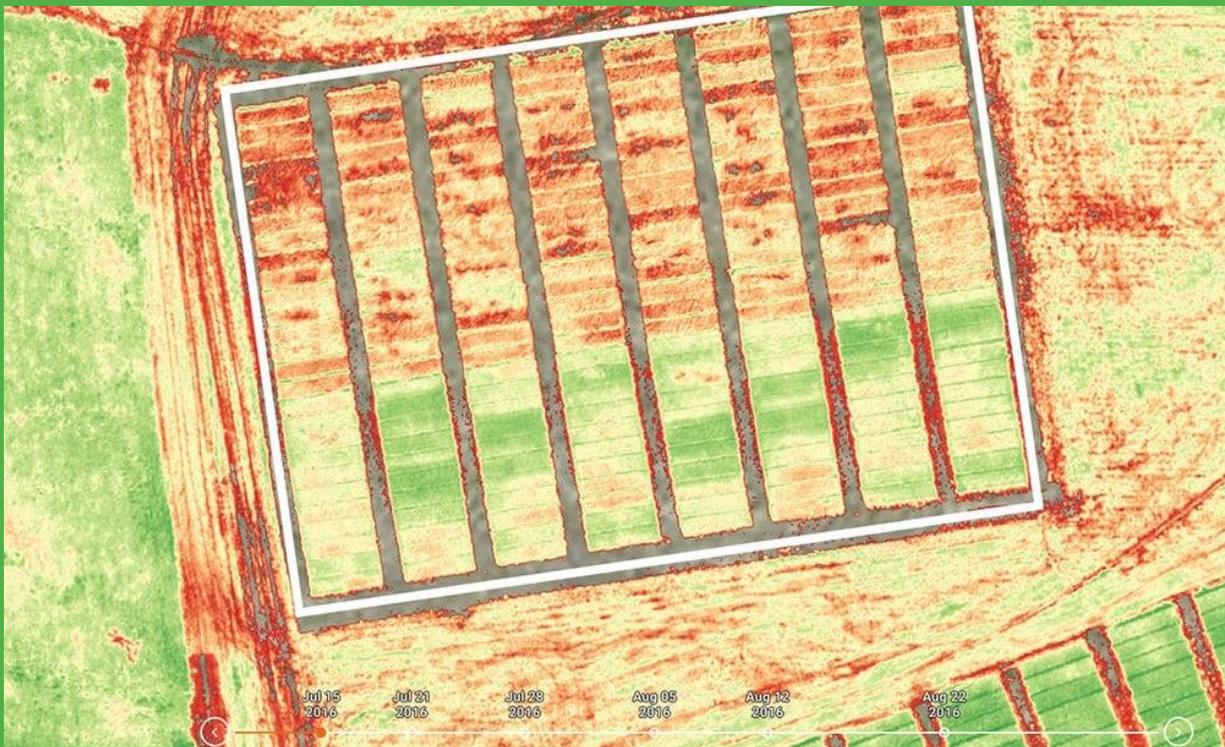

Assess Plant Health

Prescription Maps

Test Plots

Spot Spraying

1. senseFly Drones

senseFly

Turn-key solutions for every aerial works application

2. Parrot Drones

The most complete Agri-Scouting system powered by Pix4D

Parrot
BLUEGRASS

3. DJI Drones

Aerial crop scouting and spraying solutions

4. Special Cameras

Parrot
SEQUOIA

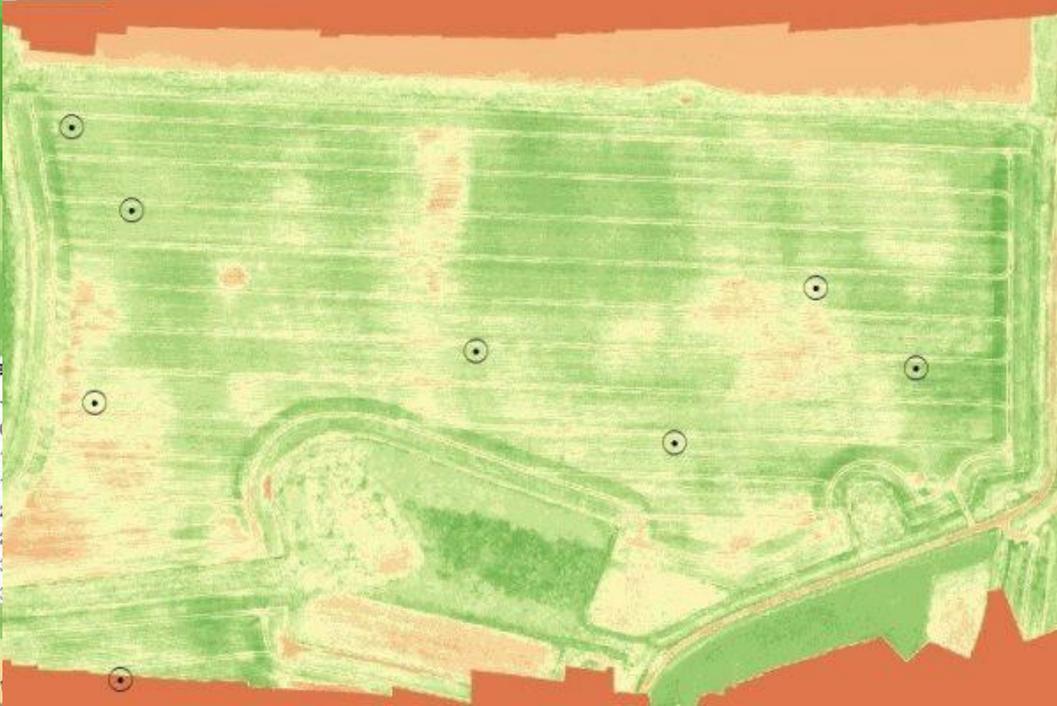

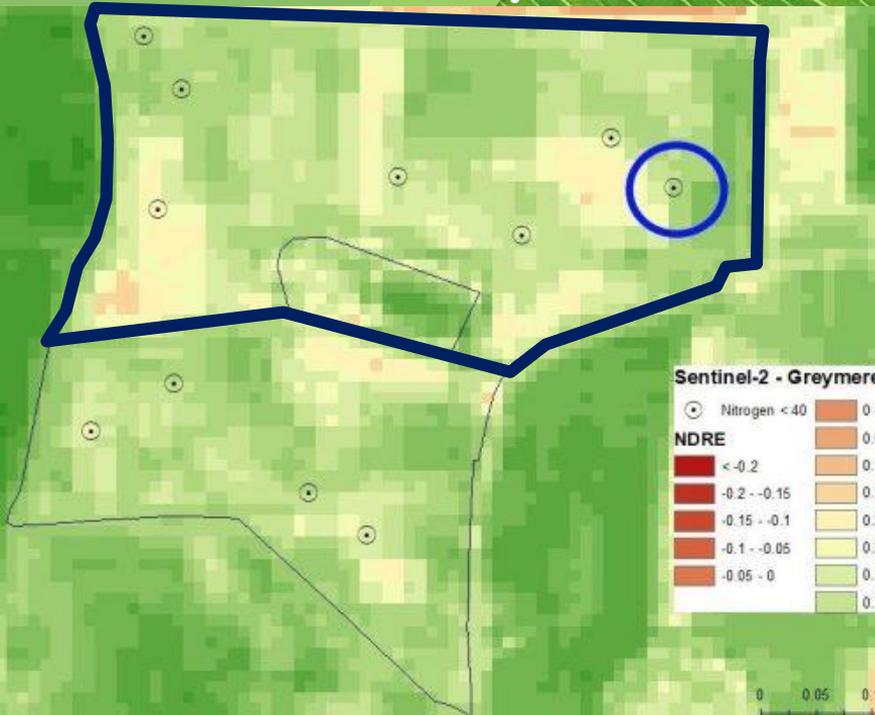

RedEdge·MX™
by MicaSense®

Drones or Satellite images?

Sentinel 2 @ 10m/pixel

Drone @ 20cm/pixel

Artificial Intelligence – next big thing

Artificial Intelligence

Machine Learning

Deep Learning

The subset of machine learning composed of algorithms that permit software to train itself to perform tasks, like speech and image recognition, by exposing multilayered neural networks to vast amounts of data.

A subset of AI that includes abstruse statistical techniques that enable machines to improve at tasks with experience. The category includes deep learning

Any technique that enables computers to mimic human intelligence, using logic, if-then rules, decision trees, and machine learning (including deep learning)

Adoption Barriers – HELLAS

Production Side

- Small land ownership
- Scattered Ownership
- Traditional Practices
- Poor Knowledge
- Need for better consulting services to farmers

Technology Side

- Payloads are expensive
- Limited connection with tractors and other machinery
- Relatively small drone performance

Thank you
